Summary

Computer Science (AI & ML) undergraduate with experience in Full Stack Development, Backend Engineering, DevOps workflows, and AI-powered automation systems. Skilled in React, Next.js, Node.js, Python, REST APIs, Docker, and scalable application development.

Skills

Languages

Python • TypeScript • JavaScript • C++ • SQL

Frontend

React • Next.js • Vite • TailwindCSS • Monaco Editor

Backend

Node.js • Express • FastAPI • REST APIs • SQLite

AI / Systems

API Integration • CI/CD • Docker • Linux • AST Instrumentation

DevOps / Tools

Git • GitHub • Docker • CI/CD • FFmpeg • Vercel

Education

B.Tech in Computer Science (AI & ML)

ITM Skills University - Navi Mumbai

Expected Graduation: 2029

Certifications

- HackerRank Python (Basic)
- freeCodeCamp Python Certification
- freeCodeCamp React Certification

Experience

Springer Capital — DevOps Intern

Mar 2026 – Jun 2026

- Worked on CI/CD workflows, deployment automation, and infrastructure reliability improvements.
- Assisted in application deployment, monitoring, debugging, and system maintenance.
- Contributed to version control workflows and technical documentation.
- Gained hands-on exposure to scalable backend infrastructure and cloud deployment practices.

Projects

AlgoViz — Interactive Algorithm Visualizer

2026 – Present

- Built a browser-based visualization platform for JavaScript and C++ algorithms with execution replay.
- Implemented runtime visualization, variable tracing, recursive call stacks, and complexity analysis.
- Developed a custom C++ execution pipeline using WebAssembly Clang with Wandbox fallback.
- Implemented Monaco Editor integration with timeline-based execution playback controls.
- Designed AST instrumentation systems and interactive React-based developer tooling.
- Used by students across college for DSA learning and debugging.

SentinelIQ — Geospatial Disaster Monitoring Platform

2026 – Present

- Architected a full-stack geospatial analytics platform using FastAPI and Next.js 15.
- Built flood-risk analysis systems using Google Earth Engine satellite telemetry and NDWI analysis.
- Developed interactive MapLibre visualizations for environmental monitoring and spatial analysis.
- Integrated scalable backend APIs and real-time geospatial data processing pipelines.

Terminal Portfolio Website

2026

- Developed a terminal-style portfolio using TypeScript, Vite, and TailwindCSS.
- Built a custom command parser with interactive shell-like behavior.

Python Music Visualizer

2025

- Built a real-time audio visualization system using Python, Librosa, and Pygame.
- Implemented spectrum analysis and particle-based rendering effects.
